RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 72 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1911 edition. Excerpt: . . . we find a source of heat which--if the amount of radium and thorium in the interior of the earth is not decidedly less than that which is found near the surface--would not only balance the earth's loss of heat by radiation, but actually increase its average temperature. Though reasons may easily be found why the surface layer of the earth may be richer in radio-active products than the core, I think that we are nevertheless driven to the conclusion that the earth is now, and has been for a long time, in thermal equilibrium, and that shrinkage by cooling does not account for any of the more recent displacements. Why, then, should not the earth long ago have settled for itself all seismic questions, and have come to rest in a comfortable state of equilibrium After the four or five million years which it has had to calm down, we might have expected that everything should be quietly arranged in uniform layers round the centre of the earth. Instead of this regular distribution of matter, we have not only mountain chains, but also the depressions and elevations which cause the distribution of land and water over the globe. The causes of these inequalities have long interested geologists and mathematicians, but the wider discussion of the stability of the whole structure on which we live has only recently come into prominence. The subject is a most difficult and intricate one, and a most important contribution...
